EDUCATION

University of British Columbia Expected Graduation: Apr. 2029
Bachelor of Applied Science – Environmental Engineering

- Relevant Courses: Computational Methods with Python, Material and Energy Balances, Environmental Engineering Design and Decision Making

TECHNICAL SKILLS

Programming: Python, C++, C, Excel VBA, HTML, MATLAB, Git, Github, Arduino IDE
Design Tools: AutoCAD, Autodesk Civil 3D, SolidWorks, ArcGIS, QGIS, EC3, Power BI, MS Office
Certifications: GIS Foundations, AutoCAD/Civil 3D Training, Python Data Analysis, Power BI Dashboards, Lean Principles for Environmental Sustainability

TECHNICAL WORK EXPERIENCE

TELUS Digital AI | Vancouver, BC Aug. 2026 – Present
Online Data Analyst

- Execute GIS spatial analyses of maps to identify topological anomalies and conflicting data points, writing discrepancy reports to engineering teams to refine AI mapping algorithms.
- Audit POI relevance and accuracy against satellite imagery, authoritative registries, and TELUS guidelines, eliminating navigational errors and improving search across 200+ location queries.

Riipen Labs | Vancouver, BC Mar. 2026 – Apr. 2026
Product Strategy Intern

- Designed and implemented growth solutions for startup clients, including GANTT-based project management, HTML platform expansion, roadmap development, and grant eligibility research.
- Analyzed stakeholder feedback from founders to prioritize and ship features, including a Power BI progress dashboard to introduce real-time visibility on client funding and member count.

ENGINEERING DESIGN TEAMS

UBC Sustaingineering | Vancouver, BC Jan. 2026 – Present
Team Lead, Marketing & Data Analysis

- Support development of sustainable mobile research testbeds (SMRTs) for field-based data monitoring, coordinating deliverables across software, mechanical, and research workstreams.
- Conduct life-cycle assessments (LCAs) and use EC3 (Embodied Carbon in Construction Calculator) to categorize Scope 1, 2, and 3 emissions across material and energy systems, quantifying environmental impact to inform material and design trade-offs.
- Produce technical and promotional materials and spearhead outreach campaigns to increase team visibility, growing follower count and recruitment of prospective members by over 25%.

TECHNICAL PROJECTS

Rainwater Harvesting Simulation | University of British Columbia Mar. 2026 – May. 2026

- Collaborated with a 6-member team to model a day-by-day Excel simulation across 11 interlinked spreadsheet tabs, tracking rainfall capture, storage, pumping, and disinfection loads.
- Calculated a weighted satisfaction-curve system evaluating designs across cost, environmental risk, GHGs, maintenance, reliability, and land use to quantify trade-offs between configurations.
- Independently programmed a custom VBA module that logs each design iteration's inputs and satisfaction score, solving the model's inability to retain results across live recalculations.

AWARDS

BC Achievement Scholarship | BC Ministry of Education and Child Care 2025
